[GitHub Profile](#) | [LinkedIn Profile](#)

Backend Engineer with expertise in building scalable, high-performance server-side applications using Node.js, TypeScript, NestJS, and Express.js. Proven experience developing production-level systems including file management platforms, e-commerce backends, and business management solutions. Strong foundation in RESTful API design, database optimization, authentication workflows, and clean architecture principles. Passionate about delivering efficient, maintainable solutions that drive business value.

Work Experience

Bunchbay Nigeria Limited, Lagos, Nigeria
Backend Engineer (Full-time, Remote)

March 2024 – Present

- Developed and maintained scalable, high-performance server-side applications using SpringBoot and Java.
- Designed and implemented RESTful APIs to facilitate seamless communication between front-end and back-end systems.
- Collaborated with front-end developers and product managers to gather requirements and ensure efficient integration of features.
- Integrated third-party services and APIs to enhance application functionality and user experience.
- Optimized database structures and queries to ensure efficient data storage, retrieval, and management.
- Implemented caching mechanisms to improve application performance and reduce server resource utilization during peak traffic using Redis.
- Ensured data security and privacy by implementing the best data encryption and user authentication practices.
- Designed and maintained CI/CD pipelines for automated application build, testing, and deployment using Github actions.

Start Innovation Hub
Backend Engineer

January 2023 – December 2024

- Developed and maintained scalable, high-performance server-side applications using Node.js, TypeScript, NestJS, and Express.js for production environments.
- Designed and implemented RESTful APIs with comprehensive validation, guards, interceptors, and role-based access control to ensure secure data flow between systems.
- Architected MySQL and MongoDB database schemas, optimized complex queries, and improved API response times by up to 40% through efficient indexing and caching strategies.
- Implemented JWT-based authentication and authorization workflows with permission-based access control for multi-tier user systems.
- Collaborated with cross-functional teams including frontend developers and product managers to gather requirements and ensure seamless integration of features.
- Documented API endpoints using Swagger for improved developer experience and maintained comprehensive technical documentation.
- Built enterprise-grade file management systems with secure uploads, validation, cloud storage integration, and granular access control.

Education

Akwa Ibom State University
B.Eng. Chemical & Petrochemical Engineering
Ikot Akpaden, Mkpato Enin, Akwa Ibom

April 2014 - February 2020

Skills

Soft Skills – Strong communication and collaboration abilities, analytical problem-solving approach, attention to detail, and adaptability in fast-paced development environments.

Technical and Hard Skills – Node.js, TypeScript, NestJS, Express.js, JavaScript, MySQL, MongoDB, RESTful API Design, JWT Authentication, Role-Based Access Control (RBAC), Git, GitHub, Postman, Swagger Documentation, Clean Architecture, System Design, Data Modeling, Error Handling, Cloudinary Integration, and Database Query Optimization.

Projects

File Management System – Built a secure file management backend with upload functionality, file validation, cloud storage integration (Cloudinary), and role-based access control. Implemented structured folder logic, metadata tracking, and admin/user-level permissions for enterprise-grade file handling.

User Management API – Developed a comprehensive authentication and authorization system using NestJS and JWT. Features include user registration, login, email verification workflows, password reset functionality, role management, and admin monitoring dashboard with user activity tracking.

E-commerce Application – Implemented complete e-commerce application with product catalog management, inventory tracking, shopping cart system, secure checkout workflows, order processing, and transaction history. Integrated payment validation and optimized API performance for high-traffic scenarios.
[View Live Documentation](#)

Business Management System – Designed backend modules handling complex business logic, CRUD operations, relational database modeling, and admin reporting features. Ensured clean architecture patterns and optimized database queries for improved performance and scalability.

GreenBounty – Contributed backend logic supporting user interactions, data synchronization between modules, and seamless API communication with frontend systems. Implemented efficient data exchange protocols and ensured system reliability.

Certifications & Achievements

Student Member, Nigeria Society of Chemical Engineers (SMNSChE)

Certificate of Participation – NSChE Annual Conference

NYSC Service Year – Secretary Role (March 2021 – March 2022)
